Question	Points	Score
Sorting Algorithms	40	
Join Algorithms	60	
Total:	100	

Question 1: Sorting Algorithms . . . . . [40 points]

We have a database file with eight million pages (N = 8,000,000 pages), and we want to sort it using external merge sort. Assume that the DBMS is not using double buffering or blocked I/O, and that it uses quicksort for in-memory sorting. Let B denote the number of buffers.

(a) **[10 points]** Assume that the DBMS has four buffers. How many passes does the DBMS need to perform in order to sort the file?

☐ 8 ☐ 10 ☐ 12 ☐ 14 ☐ 15

(b) **[5 points]** Again, assuming that the DBMS has four buffers. What is the total I/O cost to sort the file?

☐ 60,000,000 ☐ 120,000,000 ☐ 144,000,000 ☐ 240,000,000 ☐ 480,000,000

(c) **[10 points]** What is the smallest number of buffers B that the DBMS can sort the target file using only two passes?

☐ 172 ☐ 173 ☐ 174 ☐ 2,450 ☐ 2,451 ☐ 2,452 ☐ 2,827 ☐ 2,828
☐ 2,829 ☐ 3,999,999 ☐ 4,000,000 ☐ 4,000,001

(d) **[10 points]** What is the smallest number of buffers B that the DBMS can sort the target file using only five passes?

☐ 24 ☐ 25 ☐ 26 ☐ 50 ☐ 51 ☐ 52 ☐ 53 ☐ 2,450 ☐ 2,451
☐ 2,452 ☐ 3,999,999 ☐ 4,000,000 ☐ 4,000,001

(e) **[5 points]** Suppose the DBMS has twenty buffers. What is the largest database file (expressed in terms of N, the number of pages) that can be sorted with external merge sort using 6 passes?

☐ 89 ☐ 98 ☐ 65,610 ☐ 65,601 ☐ 590,490 ☐ 590,940 ☐ 49,521,980
☐ 49,251,980 ☐ 56,980,234 ☐ 65,980,234

Question 2: Join Algorithms . . . . . [60 points]

Consider relations `R(a, b)` and `S(a, c, d)` to be joined on the common attribute `a`. Assume that there are no indexes available on the tables to speed up the join algorithms.

- There are B = 75 pages in the buffer
- Table `R` spans M = 2,400 pages with 80 tuples per page
- Table `S` spans N = 1,200 pages with 100 tuples per page

Answer the following questions on computing the I/O costs for the joins. You can assume the simplest cost model where pages are read and written one at a time. You can also assume that you will need one buffer block to hold the evolving output block and one input block to hold the current input block of the inner relation. You may ignore the cost of the writing of the final results.

(a) Hash join with `S` as the outer relation and `R` as the inner relation. You may ignore recursive partitioning and partially filled blocks.

i. **[5 points]** What is the cost of the partition phase?
☐ 1,800 ☐ 2,400 ☐ 3,600 ☐ 4,800 ☐ 7,200

ii. **[5 points]** What is the cost of the probe phase?
☐ 1,800 ☐ 2,400 ☐ 3,600 ☐ 4,800 ☐ 7,200

(b) **[10 points]** Assume that the tables do not fit in main memory and that a high cardinality of distinct values hash to the same bucket using your hash function h_1. Which of the following approaches works the best?

☐ Create hashtables for the innner and outer relation using h_1 and rehash into an embedded hash table using h_2 != h_1 for large buckets

☐ Create hashtables for the innner and outer relation using h_1 and rehash into an embedded hash table using h_1 for large buckets

☐ Use linear probing for collisions and page in and out parts of the hashtable needed at a given time

☐ Create 2 hashtables half the size of the original one, run the same hash join algorithm on the tables, and then merge the hashtables together

(c) **[5 points]** Block nested loop join with `R` as the outer relation and `S` as the inner relation:
☐ 31,200 ☐ 33,000 ☐ 33,600 ☐ 42,000 ☐ 42,600

(d) **[5 points]** Block nested loop join with `S` as the outer relation and `R` as the inner relation:
☐ 31,200 ☐ 33,000 ☐ 33,600 ☐ 42,000 ☐ 42,600

(e) Sort-merge join with `S` as the outer relation and `R` as the inner relation:

i. **[5 points]** What is the cost of sorting the tuples in `R` on attribute `a`?
☐ 3,000 ☐ 5,200 ☐ 7,400 ☐ 9,600 ☐ 10,800

ii. **[5 points]** What is the cost of sorting the tuples in `S` on attribute `a`?
☐ 2,400 ☐ 3,000 ☐ 3,600 ☐ 4,200 ☐ 4,800

iii. **[10 points]** What is the cost of the merge phase assuming there are no duplicates in the join attribute?
☐ 1,200 ☐ 1,800 ☐ 2,400 ☐ 3,600 ☐ 4,800

iv. **[10 points]** What is the cost of the merge phase in the worst case scenario?
☐ 1,080,000 ☐ 2,880,000 ☐ 3, 610,000 ☐ 4, 750,000 ☐ 10,080,000
